NetEnclave®

Secure your data and applications in a zero-attack surface, zero trust environment.

Our solutions reduce your organization's digital footprint and shield your assets through zero attack surface technology. NetEnclave, enables your organization to safely leverage the cloud with controlled access and non-traceable network connectivity.

Why do you need NetEnclave?

Just when you think your organization is well-protected, unpredictable threats prove otherwise. Keep your network secure from hostile attackers and unwanted visibility with proper digital protection.

Protect your user's identities

Our dynamically generated, dedicated networks protect your identify and location by constantly disguising any identifiable information normally susceptible to Internet threats. We obscure the identity of the user thereby discouraging attacks before they even begin.

Mask your data…prevent their attacks

If they can't find you, they can't attack you. By adding an additional layer of abstraction, we disguise where your data is being sent. Hostile actors cannot launch attacks if they don't know the path on which the data travels.

Isolate business process

Offload risky functions such as research and security operations to NetEnclave. Complete isolation from your organization's network allows you to fulfill core Internet-facing functions while eliminating risk to your environment.

Stay connected, despite any incident

It is essential for users and organizations to be prepared to respond and quickly recover critical business functions. NetEnclave provides a completely out-of-band application, storage and communications network, keeping enterprises connected even when infrastructure is unavailable or compromised.

Disguise and protect your enterprise's online presence.

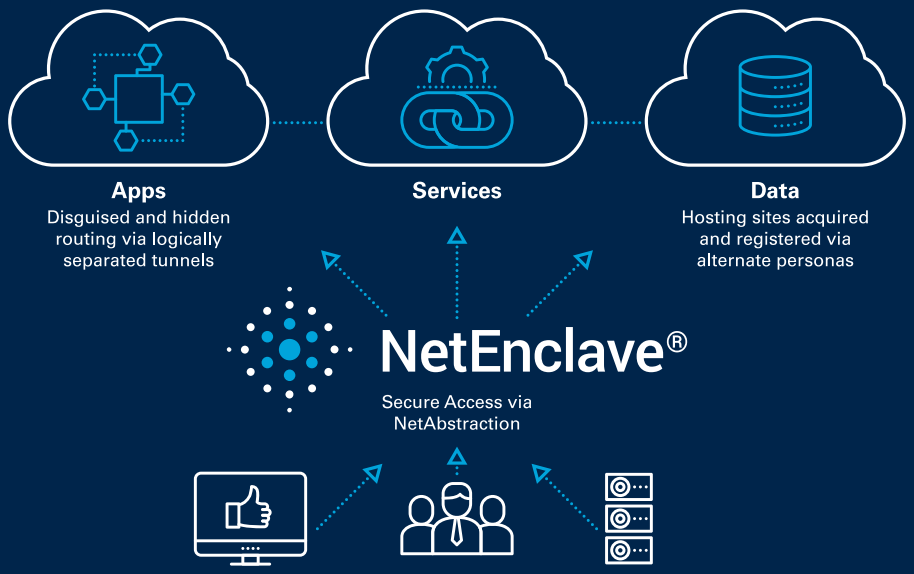
NetAbstraction™

How does NetEnclave work?

Keep your organization's critical data and applications safe from hostile attacks while concealing your organization and users' identities in the cloud and on the Internet.



Prevent threat actors from seeing your team's workflow…secure malware analysis in an isolated environment

Non-attributable sandbox for malware investigation/ detonation – **lowers your organization's digital footprint in cloud provider databases.**

Additional layers of **virtualization and security** in cloud hosting environments. Obfuscates your threat team's artifacts.

Integrations with leading threat intel firms and ability to utilize to use open source tools in investigations.

Configurable based on analyst workflow.

NetAbstraction enables access to the environment, providing **complete isolation between enterprise network/ systems and NetEnclave.**

The information provided in this document contains general descriptions or characteristics of performance which in case of actual use do not always apply as described or which may change as a result of further development of the products.
